PROJECT SUMMARY

Impacting 140 counties across Kentucky, North Carolina, and West Virginia, the West Virginia High Technology Consortium Foundation will expand WVU's successful Cloud Data Analytics Fellows program to include offerings at Appalachian State University in North Carolina and Berea College in Kentucky. A train-the-trainer model, the Cloud Data Analytics Fellows program readies university professor fellows to incorporate instruction on cloud computing, data analysis and weather data into their classrooms.

West Virginia High Technology Consortium Foundation and partners bring \$917,557 of matching funds to the project. The program will serve 620 students throughout the two-year performance period.
